Enrique:

I will see if I can find something that may have been developed in the past but I don't recall a chart of diagram that fits that description.

Ok, you know you weren't through with me.....

The info on the cooperative agreements is great. Since it was a long term multi-entity effort, do you have something (e.g., a chart) that describes the operating/organizational framework for the entire effort by involved entities? I'm sure it evolved over time. Something that you would have used in public settings to graphically describe EPA's role and the role of other governmental entities in the clean up effort and how it all fit together. I'm thinking something akin to an ICS type of structure but perhaps not as elaborate.

Subject: RE: Lead clean up sites summary document

Enrique,

I am including below a short summary from the current RPM. Also, I am attaching a page from the Five Year Review that reflects historical agreements with the state, the US Army Corps of Engineers (USACE), the city of Omaha and Douglas County. I hope this is helpful for your meeting later today.

Historically we had cooperative agreements with the City to conduct lead-based paint stabilization work and the County (Douglas County Health Department) was conducting outreach for dust related issues and providing vacuum cleaners, and collecting data from physicians regarding the blood lead levels in children. The City also had a cooperative agreement to develop the Omaha Lead Registry to provide the public with access to information about the status of investigation and cleanup activities at the site. In addition, as part of UPRR settlement agreement UPRR was funding the Omaha Healthy Kids Alliance which was also conducting extensive outreach activities.

Since June 1, 2015, we've developed cooperative agreements with the City to:

- 1) assume operations of the public information center
- 2) obtain access to and collect soil samples from properties where access was previously denied
- 3) remediate as many of the remaining yards as they can obtain access to
- 4) develop an interface to, and enter data into EPA's Omaha Lead database to track the status of all calls, access, sampling and cleanup information
- 5) Continue LBP stabilization activities

The Douglas County Health Department (DCHD) cooperative agreements have been amended to provide funding to allow DCHD to continue to conduct outreach activities, to obtain access, and to collect and analyze dust samples.

We can provide more detail if needed or copies of the relevant cooperative agreements. Let me know how else we can support you.

Hi Mary

Thanks again for all your help.

Regarding your site in region 7, could you share some insights or documents that would describe how you organized your efforts? California, with our help, is trying to create an operating framework that mirrors an incident command structure in order to make lots of headway in the next two years.

One specific question would be how you engaged state and local agencies in the actual clean up effort. California is grappling with how best to leverage local government resources. Did you all do any support agency cooperative agreements to cover state and local government costs?

If there's something you all can send me prior to noon PDT, that would be great. We're meeting with California and Los Angeles county at 1 pm PDT.

Thanks again

Enrique.

> We are currently directly and indirectly involved in lead contaminated soil clean ups throughout Region 9. And as some of you are aware, the State of California is leading a massive facility closure and residential lead clean-up effort for the now closed Exide battery recycling facility near east Los Angeles. Over the course of the last several months and triggered by the Exide effort, we have had numerous inquiries from congressional offices, local officials, and ngo's about the EPA's role and experience in these types of clean ups. In light of those inquiries, we thought it would be useful to compile information about past and ongoing EPA lead cleanups, both in Region 9 and at a national level. More specifically, we have gathered information on the duration of cleanups, the number of properties addressed, lead levels prior to cleanup, and the cleanups' total cost. Though our RA has had particular interest in larger, more urban cleanups, the cleanups we've described are relatively varied and include removal and remedial actions in Regions 3, 7, 9, and 10. We've compiled the attached information about EPA lead cleanups through discussions within R9 and with staff in other regions and would appreciate your and your staff's review for accuracy. Again, we are looking to use the attached document as a "fact sheet" on examples of medium and large scale lead clean-up efforts to be distributed when we receive external inquiries.
